

# LIFTING SOLUTIONS

## EXPERIENCE PERFORMANCE.

Artificial lift products and services that consistently outperform the market and reduce OPEX.

## LET'S SOLVE YOUR LIFT CHALLENGES

Lifting Solutions (LS) was founded in 2014 with a strong determination to improve the artificial lift products and services available to the oil and gas industry. Through research and development, the LS team of experienced professional engineers and lift specialists have developed superior products that consistently outperform the market. Today, we have over 300 employees who are essential in delivering our premium quality products across the globe.

From North America and through the world, Lifting Solutions provides clients with specialized products and services that are designed to support the most challenging wells, reduce OPEX, and support Environment, Social and Governance (ESG) goals of our clients.

When clients work with us, they Experience Performance.

## FACILITIES

Our flagship base operations are based out of our Midland, Texas, location where we have the most modern pin-to-pin plant in the industry delivering welding and inspection services on-site.

From here, we distribute Endless Rod and Progressing Cavity Pump products across the USA. We also service Texas, New Mexico, Colorado, and beyond.

We have a second USA-dedicated service base in Williston, North Dakota delivering exceptional service and shipping superior products to the Bakken region and surrounding states.

## PRODUCTS

- Endless Rod Continuous Sucker Rod
- KeBond, Coated Endless Rod

## SERVICE

- Applications
- Equipment
- Welding and Repair

## ENDLESS ROD®

Lifting Solutions Endless Rod is a global leader in continuous sucker rod manufacturing, service and application engineering expertise. Our Endless Rod is suitable for a multitude of well conditions in reciprocating rod pump (RRP) and progressing cavity pump (PCP) applications. Endless Rod is available in bare continuous rod and coated continuous rod.

### FEATURES AND BENEFITS

- Reduce intervention frequency over the life cycle of your well
- Lower production costs by increasing pump life and reducing energy usage
- Decrease tubing wear and rod break related interventions
- Minimize pressure losses around couplings by increasing annular space
- Lower string weight
- Reduce power and equipment requirements and use smaller pumping units at surface
- Increase service efficiency
- Reduce bridging of solids with constant velocity of fluid and solids in the tubing
- Run larger-sized rods in smaller diameter tubing

### PRODUCT LINE / SIZES

We have the largest range of sizes and grades starting from 3/4" up to 1-3/16" to accommodate almost any well application requirement. Our state-of-the-art industry-leading pin-to-pin facility enables us to build quality custom strings safely and consistently for any continuous rod application. Our field services technicians are certified to weld both round and elliptical continuous rod that is manufactured by Lifting Solutions and our competitors. We have the logistics, people, and equipment to support our clients whether that is transferring rod, cutting rod on location, or transporting products to and from well sites we have what it takes to support you safely and efficiently.

### ENDLESS ROD SERVICE

With the largest fleet in North America, our Endless Rod fleet is equipped with the right tools to keep downtime to a minimum. Our units are built with features that reduce non-productive time, minimize the number of operators required onsite, and eliminate the need for additional equipment.

Our Endless Rod rigs feature a mast-mounted, hydraulically deployed continuous rod gripper with a pull capability of up to 50,000 lbs. and a derrick rated to 70,000 lbs. Our rigs are equipped with jointed rod tongs and are capable of safely and efficiently pulling and laying down jointed sucker rod strings.

### APPLICATIONS

We service both PCP and RRP wells. Whether it's slant or vertical applications, we have the right equipment.

### WELDING AND REPAIR

Lifting Solutions has strategically placed welding and repair bases (pin-to-pin facilities) near all major production areas. We are equipped to service your continuous rod and ensure its optimal performance.

### SERVICE EQUIPMENT

Our units are built with features that reduce non-productive time, minimize the number of operators required onsite, and eliminate the need for additional equipment. We offer service solutions for both conventional sucker rod and continuous sucker rod wells in vertical and slant wells.

- Endless Rod Unit
- Endless Rod Welder
- Rod Transport and Repair Unit
- Truck Mounted Gripper

### OUR TEAM

Lifting Solutions is proud of our number one resource – our people! We aim to hire the best in the industry and we are confident when our clients call they are getting the best service every step of the way!
