ENDLESS ROD MATERIAL SPECIFICATION

D GRADE

AISI 15 Modified Series Carbon Alloy Steel

Recommended for non-corrosive wellbore environments.

DS GRADE HIGH STRENGTH

AISI 15 Modified Series Carbon Alloy Steel

Recommended for non-corrosive wellbore environments that require a high-strength product.

CD GRADE

AISI 41 Modified Series Chrome-Moly Alloy Steel

Recommended for mildly corrosive wellbore environments that are effectively inhibited against corrosion.

CS GRADE HIGH STRENGTH

AISI 41 Modified Series Chrome-Moly Alloy Steel

Recommended for mildly corrosive wellbore environments that are effectively inhibited against corrosion and require a high-strength product.

ND GRADE

AISI 43 Modified Series Nickel-Chrome-Moly Alloy Steel

Promotes improved durability related to fatigue resistance. Recommended for mildly corrosive wellbore environments that are effectively inhibited against corrosion.

NS GRADE HIGH STRENGTH

AISI 43 Modified Series Nickel-Chrome-Moly Alloy Steel

Promotes improved durability related to fatigue resistance. Recommended for mildly corrosive wellbore environments that are effectively inhibited against corrosion and require a high-strength product.

MATERIAL PROPERTIES

	Grade	Material	Min. Tensile Strength (ksi)	Min. Yield Strength (ksi)	Max. Average Hardness (HRC)
	D	C-Mn	115	85	28
	DS	C-Mn	140	115	36
	CD	Cr-Mo	115	90	28
	CS	Cr-Mo	140	115	36
	ND	Ni-Cr-Mo	115	90	30
	NS	Ni-Cr-Mo	140	115	36

ENDLESS ROD[®]

INCREASE YOUR OPERATION EFFICIENCY

VERSATILE TRANSPORT

Lifting Solutions Endless Rod[®] continuous sucker rod is manufactured to precise specifications using state-of-the-art technology, superior processes, and the highest quality material. The result is a premium continuous sucker rod—one uniform diameter with only two connections—that is suitable for a multitude of well conditions in RRP and PCP applications.

FEATURES AND BENEFITS

- Reduce overall intervention frequency over the life cycle of your well
- Lower production costs by increasing pump life and reducing energy usage
- Decrease tubing wear and rod break related interventions
- Minimize pressure losses around couplings by increasing annular space
- Lower string weight
- Reduce power and equipment requirements and use smaller pumping units at surface
- Increase service efficiency
- Reduce bridging of solids with a constant velocity of fluid and solids in the tubing
- Run larger-size rods in smaller diameter tubing

SIZES

Endless Rod is available in the same metallurgies and sizes as conventional rod. Product selection is based on load requirements and fluid properties to best suit the application.
